Risk Communication

Litera Japan Corporation CORPORATE PROFILE

Creating a Safer Society Together

MISSIONS OF LITERA JAPAN

Bridging Science/Technology and Society

With the advancement of science and technology, it is vital that related safety information will be accurately explained to society. Equally, experts need to be informed of society's value. We aim to bridge perception gaps between society and experts.

Improving Risk Communication and Risk Literacy

Creating a safer society requires "risk literacy"—a capacity to understand safety-related information. Litera Japan aims to contribute to a capacity building for improved risk literacy through conducting research and practices on public communication.

- 7 Plenary talk at the International Atomic Energy Agency, Vienna, 2016 (Photo: by IAEA)

LITERA JAPAN'S ACTIVITIES

Communication Support

Informing uncertainties surrounding products and services does not sound difficult – yet in reality, it requires communication skills and expertise. Litera Japan supports public communication by business/governmental organisations based on our extensive analyses and profound experiences.

Global Communication

Globalising political and business environment necessitates a new approach for public communication. We provide communication support for private and public organisations with our overseas partners in Europe and beyond.

Dialogue, Seminar Planning and Organisation

Litera Japan has extensively conducted press briefings and business seminars in Japan and abroad. In 2015, we organised a press briefing about mobile phone and health risks in Geneva, Switzerland, which will be followed another one in 2016. Organising round tables with local citizens is another expertise that Litera Japan offers – we organised a participatory exercise, Stakeholder Dialogue about the Future of Nuclear Energy, Shizuoka/Japan. We also moderate in-house dialogues about risk management and communication for private companies.

Education, Training and Research

Litera Japan is also active in the fields of education. Dr Nishizawa currently teaches risk communication at four national universities (Universities of Tokyo, Tsukuba, Nara Women's' University and Tokyo Institute of Technology). Litera Japan offers in-house training for business and industries – our clients include food and beverages, utilities and automobile companies. Dr Nishizawa has been conducting communication-related research and published widely in Japanese and English. She has given talks as invited speaker in Taiwan and China in 2015, and Austria, France, Belgium and Germany in 2016.
